Horizontal electrophoresis systems

Simple, leak-free casting

Minigel system

- Ideal for quick screening
- Runs up to 16 samples on one gel with combs supplied

Midigel systems

- Available with patented buffer recirculation method which prevents buffer's ionic depletion on long gel runs, keeps ionic gradients from distorting results when multiple sample series are run simultaneously, and prevents pH changes that can cause problems in RNA gels
- Run up to 32 samples on one gel with combs supplied

Large gel systems

- Improve resolution in Northern and Southern blotting of large gels and multiple samples
- Available with same self-contained buffer recirculation method as Midigel System
- Run up to 36 samples per comb position with supplied combs
- May also be used with programmable power inverter for field inversion electrophoresis

Wide-format system

- Runs 25 to 250 samples simultaneously on one gel
- May be used with included microwell-format combs and a multichannel pipetter to load samples directly from a 96-well plate for faster loading and reduced error

Fisherbrand™ Reusable CulturTek™ Volumetric Pipets with Large Tip Openings

Originally developed for in-house culture production at Smith, Kline and French Laboratories. Heavy borosilicate glass provides greater resistance to chipping and breakage than conventional volumetric pipets, and large tip opening (approximately 4mm) fills and drains quickly.

- Calibrated “To Deliver”
- Reinforced tip and mouthpiece bulb joints
- Shorter length makes pipets easier to handle
- Permanent amber markings
- Top tooled for cotton plugs (plugs not supplied)
